REQUIRED IMPORTANT SAFETY INSTRUCTIONS
WARNING
TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSON, OBSERVE THE FOLLOWING:

1. SAVE THESE INSTRUCTIONS
   This manual contains important safety and operating instructions for BatteryMINDer Models 12117 and 12118.

2. Do not expose charger to rain or snow.

3. Use of an attachment not recommended or sold by VDC Electronics may result in a risk of fire, electric shock, or injury to persons.

4. To reduce risk of damage to electric plug and cord, pull by plug rather than cord when disconnecting charger.

5. An extension cord should not be used unless absolutely necessary. Use of improper extension cord could result in a risk of fire and electric shock. If an extension cord must be used, make sure:
   a) That pins on plug of extension cord are the same number, size, and shape as those of plug on charger;
   b) That extension cord is properly wired and in good electrical condition; and
   c) That wire size is large enough for ac ampere rating of charger as specified in Table below.

<table>
<thead>
<tr>
<th>AC input rating, amperes&lt;sup&gt;a&lt;/sup&gt;</th>
<th>AWG size of cord</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equal to or greater than 0 But less than</td>
<td>Length of cord, feet (m)</td>
</tr>
<tr>
<td></td>
<td>25 (7.6)</td>
</tr>
<tr>
<td>0</td>
<td>18</td>
</tr>
</tbody>
</table>

<sup>a</sup> If the input rating of a charger is given in watts rather than in amperes, the corresponding ampere rating is to be determined by dividing the wattage rating by the voltage rating - for example: 1250 watts/125 volts = 10 amperes

6. Do not operate charger with damaged cord or plug – replace the cord or plug immediately.

7. Do not operate charger if it has received a sharp blow, been dropped, or
otherwise damaged in any way; call **VDC Electronics Tech Support Dept. 800.379.5579 x206 (ET)** for advice.

8. Do not disassemble charger; call **VDC Electronics Tech Support Dept. 800.379.5579 x206 (ET)** for advice when service or repair is required. Incorrect reassembly may result in a risk of electric shock or fire.

9. To reduce risk of electric shock, unplug charger from outlet before attempting any maintenance or cleaning. Turning off controls will not reduce this risk.

10. **WARNING – RISK OF EXPLOSIVE GASES**
    a) WORKING IN VICINITY OF A LEAD-ACID BATTERY IS DANGEROUS. BATTERIES GENERATE EXPLOSIVE GASES DURING NORMAL BATTERY OPERATION. FOR THIS REASON, IT IS OF UTMOST IMPORTANCE THAT YOU FOLLOW THE INSTRUCTIONS EACH TIME YOU USE THE CHARGER.
    b) To reduce risk of battery explosion, follow these instructions and those published by manufacturer of any equipment you intend to use in vicinity of battery. Review cautionary marking on these products and on engine.

11. **PERSONAL PRECAUTIONS**
    a) Consider having someone close enough by to come to your aid when you work near a lead-acid battery.
    b) Have plenty of fresh water and soap nearby in case battery acid contacts skin, clothing, or eyes.
    c) Wear complete eye protection and clothing protection. Avoid touching eyes while working near battery.
    d) If battery acid contacts skin or clothing, wash immediately with soap and water. If acid enters eye, immediately flood eye with running cold water for at least 10 minutes and get medical attention immediately.
    e) NEVER smoke or allow a spark or flame in vicinity of battery or engine.
    f) Be extra cautious to reduce risk of dropping a metal tool onto battery. It might spark or short-circuit battery or other electrical part that may cause explosion.
    g) Remove personal metal items such as rings, bracelets, necklaces, and watches when working with a lead-acid battery. A lead-acid battery can produce a short-circuit current high enough to weld a ring or the like to metal, causing a severe burn.
    h) Use charger for charging a LEAD-ACID battery only. It is not intended to supply power to a low voltage electrical system other than in a starter-motor application. Do not use battery charger for charging dry-cell batteries that are commonly used with home appliances. These batteries may burst and cause injury to persons and damage to property.
i) NEVER charge a frozen battery or a battery at a temperature above 123° F.

12. PREPARING TO CHARGE
a) If necessary to remove battery from vehicle to charge, always remove grounded terminal from battery first. Make sure all accessories in the vehicle are off, so as not to cause an arc.
b) Be sure area around battery is well ventilated while battery is being charged.
c) Clean battery terminals. Be careful to keep corrosion from coming in contact with eyes.
d) Add distilled water in each cell until battery acid reaches level specified by battery manufacturer. Do not overfill. For a battery without removable cell caps, such as valve regulated lead acid batteries, carefully follow manufacturer’s recharging instructions.
e) Study all battery manufacturer’s specific precautions while charging and recommended rates of charge.
f) Determine voltage of battery by referring to car owner’s manual and make sure it matches output rating of battery charger.

13. CHARGER LOCATION
a) Locate charger as far away from battery as dc cables permit.
b) Never place charger directly above battery being charged; gases from battery will corrode and damage charger.
c) Never allow battery acid to drip on charger when reading electrolyte specific gravity or filling battery.
d) Do not operate charger in a closed-in area or restrict ventilation in any way.
e) Do not set a battery on top of charger.

14. DC CONNECTION PRECAUTIONS
a) Connect and disconnect dc output clips only after setting any charger switches to “off” position and removing ac cord from electric outlet. Never allow clips to touch each other.
b) Attach clips to battery and chassis as indicated in 15(e), 15(f), and 16(b) through 16(d).

15. FOLLOW THESE STEPS WHEN BATTERY IS INSTALLED IN VEHICLE. A SPARK NEAR BATTERY MAY CAUSE BATTERY EXPLOSION.
TO REDUCE RISK OF A SPARK NEAR BATTERY:
a) Position ac and dc cords to reduce risk of damage by hood, door, or moving engine part.
b) Stay clear of fan blades, belts, pulleys, and other parts that can cause
injury to persons.
c) Check polarity of battery posts. POSITIVE (POS, P, +) battery post usually has larger diameter than NEGATIVE (NEG, N, −) post.
d) Determine which post of battery is grounded (connected) to the chassis. If negative post is grounded to chassis (as in most vehicles), see (e). If positive post is grounded to the chassis, see (f).
e) For negative-grounded vehicle, connect POSITIVE (RED) clip from battery charger to POSITIVE (POS, P, +) ungrounded post of battery. Connect NEGATIVE (BLACK) clip to vehicle chassis or engine block away from battery. Do not connect clip to carburetor, fuel lines, or sheet-metal body parts. Connect to a heavy gage metal part of the frame or engine block.
f) For positive-grounded vehicle, connect NEGATIVE (BLACK) clip from battery charger to NEGATIVE (NEG, N, −) ungrounded post of battery. Connect POSITIVE (RED) clip to vehicle chassis or engine block away from battery. Do not connect clip to carburetor, fuel lines, or sheet-metal body parts. Connect to a heavy gage metal part of the frame or engine block.
g) When disconnecting charger, turn switches to off, disconnect AC cord, remove clip from vehicle chassis, and then remove clip from battery terminal.
h) See operating instructions for length of charge information.

16. FOLLOW THESE STEPS WHEN BATTERY IS OUTSIDE VEHICLE. A SPARK NEAR THE BATTERY MAY CAUSE BATTERY EXPLOSION.
TO REDUCE RISK OF A SPARK NEAR BATTERY:
a) Check polarity of battery posts. POSITIVE (POS, P, +) battery post usually has a larger diameter than NEGATIVE (NEG, N, −) post.
b) Attach at least a 24-inch-long 6-gauge (AWG) insulated battery cable to NEGATIVE (NEG, N, −) battery post.
c) Connect POSITIVE (RED) charger clip to POSITIVE (POS, P, +) post of battery.
d) Position yourself and free end of cable as far away from battery as possible – then connect NEGATIVE (BLACK) charger clip to free end of cable.
e) Do not face battery when making final connection.
f) When disconnecting charger, always do so in reverse sequence of connecting procedure and break first connection while as far away from battery as practical.
g) A marine (boat) battery must be removed and charged on shore. To charge it on board requires equipment specially designed for marine use.
### SIMPLE INSTRUCTIONS:

1. Place the positive (RED) connection on the positive battery terminal.
2. Place the negative (BLACK) connection on the negative battery terminal.
3. Plug in the BatteryMINDer.
4. On/Charging should be RED and Battery Condition light should be GREEN.

CHARGING STAGES
• **Constant Power** (sometimes called bulk) is the main charging stage. The unit outputs its full power. Battery voltage rises until the battery reaches the trip voltage (see table).
• **Float** (sometimes called maintenance) is the unit’s long term stage. The unit is designed to be left connected indefinitely. It will keep your battery fully charged, ensuring no sulfate can form. The unit maintains the float voltage (see table) using very little power as it actively monitors your battery and adjusts its output several times a second.

ADDITIONAL FEATURES
• **Desulfation** is the removal of sulfate build-up from your battery’s plates. It occurs at all times the unit is connected.
• **Short Circuit, Spark and Reverse Polarity Protection** prevent the unit from having any output unless it is properly connected to your battery.
• **Temperature Protection** shuts down the unit if operating temperature is exceeded.

INDICATOR LIGHTS
• **On/Charging** light is RED anytime the unit is plugged in to 120V AC Power.
• **Battery Condition** light is GREEN when the unit it is correctly connected to a battery. Battery Connection light is **FLASHING GREEN** when the unit is in Float Mode.

MAINTENANCE BUTTON
• **Press for Maintenance** skips the Constant Power stage, putting the unit into Float Mode.

TROUBLESHOOTING
**VDC Electronics Technical Support: (800) 379-5579 x206**
• Unit does not have an output unless connected to a battery. In order to test the output using a meter, connect the meter to your battery. When you connect the unit, you will see the voltage rise.
• If the unit is not in float after 72 hours (per battery if charging multiple), check to make sure your battery meets the minimum voltage (see table) requirements. Unit will not operate if battery is below the minimum voltage.
  If there is a load on your battery, disconnect it and charge again.
  If the problem persists, your battery may be shorted or badly sulfated, use the “Press for Maintenance” button to override the charge stage and go directly into float.
• Badly sulfated batteries may need 2-4 weeks of float charging to show results.

*Visit our learning center at BatteryMINDers.com for additional battery information.*
**VOLTAGE TABLE**

**MV:** Minimum Voltage of a battery the unit will accept.

**TV:** Trip Voltage to move from Constant Current stage into Float stage.

**F:** Voltage during the Float stage.

**CHARGING / MAINTAINING MULTIPLE BATTERIES**

To properly charge or maintain multiple batteries they should all be the same type (gel, flooded or AGM) and condition. It is OK to mix deep cycle and starter. Charge each battery individually before connecting together. Never connect batteries at different states of charge. The charged battery will rapidly transfer energy to the discharged battery possibly causing catastrophic failure.

Once the batteries are charged, use 18 gauge or greater wire to connect the batteries.

If connecting multiple batteries of the same voltage, wire them in parallel (BatteryMINDer positive to positive A to positive B, BatteryMINDer negative to negative A to negative B). This is the same type of connection you would use when jumping a car (in fact, jumper cables are great for this).

---

**Parallel Connection Diagram**

(12V System using Two 12V Batteries)

[Diagram of parallel connection]
If connecting 2 batteries of half your unit’s voltage (example: 6V batteries on a 12V unit), wire them in series (BatteryMINDer positive to positive A, negative A to positive B, negative B to BatteryMINDer negative). When wired in series they act as one large system at the combined voltage (example: 6V + 6V = 12V). You can connect these systems in a series parallel configuration in order to charge or maintain 4 or batteries in groups of 2.

As long as your batteries stay wired together they act as one large battery allowing you to charge and discharge them as a group.
FOR REPAIR OR REPLACEMENT

All returns must be authorized by VDC Electronics.

In the event that you believe your product may be defective, you MUST speak to a VDC Electronics technician at 1-800-379-5579 x206 (ET) before proceeding further.

BatteryMINDer One-Year 100% Unconditional Money-Back GUARANTEE

This BatteryMINDer product is guaranteed to perform as claimed or WE will refund your full purchase price, including all taxes, shipping or handling cost applicable to the purchase.

Unit must be returned freight prepaid together with Proof of Purchase directly to VDC Electronics, Inc., NOT TO THE DEALER FROM WHICH IT WAS PURCHASED.

BatteryMINDer Five-Year Limited WARRANTY

VDC Electronics, Inc. warrants this product for FIVE years from date of purchase at retail against defective material or workmanship and will be repaired or replaced at no charge. We make no warranty other than this limited warranty and expressly exclude any implied warranty including any warranty for consequential damages. This limited warranty is not transferable.

Unit must be returned freight prepaid together with Proof of Purchase directly to VDC Electronics, Inc., NOT TO THE DEALER FROM WHICH IT WAS PURCHASED.

IMPORTANT NOTICE

BatteryMINDer® Five-Year Warranty Registration Reminder

Online Registration:
http://www.BatteryMINDers.com/register

Please register your unit online within 10 days of purchase. Due to the ever-changing technology associated with this BatteryMINDer® unit, we may be unable to keep you apprised of significant upgrades, changes, etc. without your registration. The information you provide upon registration will be used to keep a record of your purchase and will assist in providing support should you ever need to contact our Technical Service department:
techsupport@vdcelectronics.com; 800-379-5579 x206 (ET).
