

BatteryMINDer®

36-Volt 36271 and 48-Volt 48021 Battery Maintainer-Desulfators ADDENDUM

(To be provided to all customers at time of sale or installation of BatteryMINDer)

Failure to follow these requirements / recommendations and those found in the Instruction Manual enclosed with the unit, may void your warranty or prevent BatteryMINDer from providing performance it is capable of.

IMPORTANT!! It is extremely important to know the condition - health of your batteries BEFORE using BatteryMINDer for the first time.

1. Always keep water in each cell of each battery at level according to battery maker's requirements.
2. Charge your batteries fully **after each use** and before plugging in BatteryMINDer.
3. Position or permanently mount BatteryMINDer to your garage wall near electrical outlet you plan to use. It is important to locate BatteryMINDer so it can be easily seen and you're able to observe the front panel with the LED indicators (lights).
4. You can leave your BatteryMINDer plugged in at all times as it does not use any electricity except when maintaining-desulfating your batteries. Typical cost of electricity is less than \$2.00 / Month with Unit operating 24/7.
5. Check water level frequently especially during the season(s) you are using your vehicle. Your main charger may be known to use considerable water, especially as batteries become older. Your batteries, **once BatteryMINDer dissolves** the sulfate and batteries are in relatively good condition, will become virtually "MAINTENANCE-FREE" during extended non-use, avoiding the need to **refill the water** during your absence.
6. To ensure minimal water loss keep BatteryMINDer connected for as much time as possible even during Seasonal use and **always during off-season.**
7. **DO NOT LEAVE YOUR MAIN CHARGER CONNECTED DURING OFF-SEASON, extended NON-USE.**
8. USE BatteryMINDer weekly or as frequently as possible during the season to dissolve harmful sulfate build-up.
9. When disconnecting BatteryMINDer charging cord from socket- receptacle, be sure to **grasp plug not the wire to avoid damage to plug or socket. Damage caused by failure to follow this instruction can void your warranty.**

By following all the above you will realize greater satisfaction from your Battery Electric Vehicle while lowering operating costs.
